

Multi-cycle Egg Freezing Packages

At ReproMed, we understand that fertility is personal, and planning for the future should be both accessible and tailored to your needs. That's why we've introduced our **new multi-cycle egg freezing packages** – designed to provide the best chance of preserving your fertility with an approach that maximises success and affordability.

DID YOU KNOW? Some eggs may not survive the thawing, fertilisation, or embryo development process. Having more increases your chances of a successful pregnancy later. It's estimated that survival rates of eggs vary between 85 - 90%, and from all of the eggs that survive is about 75% that will finally fertilise.

Why Choose a Multi-Cycle Package?

- ⇒ Multiple cycles increase the number of eggs frozen, giving you more options for the future.
- ⇒ Designed especially for individuals with low ovarian reserve or conditions like endometriosis.
- ⇒ Enjoy significant savings compared to single-cycle pricing.
- ⇒ Our team supports you every step of the way, ensuring you feel informed and empowered.

Who Can Benefit?

- ⇒ This package is ideal for individuals who may require multiple cycles to achieve an optimal number of frozen eggs, particularly those with a diagnosis of low ovarian reserve or endometriosis. It's also a great option for those looking for a proactive approach to fertility preservation.

We've partnered with:
